

Variant2

1. **Define stupor?** state of stunnedness, from which the patient comes out for a short time during a conversation with him. Responds slowly when speaking
2. **List the types of body position of the patient.** (1,2,3) 1. Active; 2. Passive; 3. Forced.
3. **List the most commonly used places for determining edema by palpation.** (1,2,3,4,5,6)
1. Shins; 2. Ankles; 3. sacrum; 4. Sternum; 5. Cheekbone; 6. Forehead.
4. **What is an "anamnesis"?** (1,2,3) 1. Information about the medical history; 2. About the diseases suffered by the patient; 3. About the patient's life history
5. **What formulas allow for the assessment of anthropological indicators?** (1,2,3) 1. Growth index; 2. Weight and height index; 3. Coefficient of proportionality
6. **What is a laxative fever?** (1,2) 1. Daily temperature fluctuations exceeding 10s; 2. Prolonged increase in body temperature
7. **How to identify a pulse deficit pulsus deficiens.** (1,2) With a pulse deficit, the number of pulse waves per unit of time is less than the number of heartbeats
8. **What is called shortness of breath?** (1,2,3) 1. Change in the frequency of respiratory movements; 2. Change in the depth of respiratory movements; 3. Violation of the rhythm of breathing
9. **List the signs of pathological changes in the lymph nodes.** (1,2,3) 1. Dense consistency; 2. Adhered to each other and / or with the surrounding tissue; 3. Painful; 4. Skin change over l / y
10. **What is characteristic of "cardiac" edema?** (1,2,3,4,5) 1. Pronounced peripheral acrocyanosis; 2. Cold skin in places of edema; 3. Dense in consistency; 4. Initial appearance on the feet, shins; 5. The appearance or intensification of edema in the evening.
11. **Describe the algorithm for determining free fluid in the abdominal cavity in the vertical position of the patient** (1,2,3): 1. Percussion is performed from the xiphoid process to the pubic joint in a standing position until dullness 2. Without removing the finger of the plessimeter, the patient moves to a horizontal position; 3. Percussion continues with an assessment of the change in the nature of the sound.
12. **How many sections of the abdomen are listened to according to the rules for conducting auscultation?** 9
13. **What does an electrocardiograph record?** Potential difference (voltage) between different parts of the patient's body surface several parts of the body).
14. **What problem can arise when recording an ECG** (1) if the room is not warm enough, and what is the way to solve it? (2) 1. The patient's cold tremor may cause registration artifacts; 2. Raise the room temperature

15. Which arm is recommended for a ABPM cuff? On the "non-working" hand (left for right-handers, right for left-handers).

16. What preparation is required before electromyography(1,2,3)? 1. For 24 hours - the abolition of certain drugs (tranquilizers, muscle relaxants and other drugs that affect the nervous and muscular systems); 2. Abstinence from alcohol; 3. For 2-3 hours - do not drink strong tea and coffee, caffeinated drinks, chocolate.

17. What causes can lead to the appearance of urine of red shades up to bright red? (1,2,3) 1. Blood (erythrocytes) in the urine; 2. Pigments after eating beets, blueberries, carrots, etc.; 3. Metabolites of various drugs (analgin, aspirin, etc.).

18. What is the purpose of urinalysis using the Zimnitsky method? Evaluation of the functional (concentration and excretory) ability of the kidneys under normal conditions

19. What are the main indicators included in the coagulogram(1,2,3,4,5)? 1. Prothrombin time (PT); 2. Prothrombin index (PTI); 3. International normalized ratio (INR); 4. Activated partial thromboplastin time (APTT); 5. Fibrinogen level.

20. What does the detection of elastic fibers in the sputum indicate? About the collapse of the lung tissue (for example, with an abscess, bronchiectasis, etc.).

21. What is the most common complication associated with the use of radiopaque agents? Allergic reaction

22. Which structures are imaged using computed tomography? (1,2,3,4,5,6,7) 1. Bones; 2. Soft tissues; 3. Blood vessels; 4. Chest; 5. Brain; 6. Abdominal organs; 7. Pelvic organs.

23. List the types of echocardiography. (1,2,3,4) 1. Transthoracic; 2. Transesophageal; 3. Intracardiac; 4. Stress echocardiography

24. What does preparation include for ultrasound? (1,2,3,4) 1. Diet with restriction of fatty and gas-forming food 3 days before the study; 2. The study is carried out on an empty stomach (the last meal and water 8 hours before the study); 3. Refrain from chewing gum and smoking before the study; 4. Accept the use of medicines approved by the doctor

25. Define EGDS? This is an endoscopic examination that allows you to examine the internal lumen and mucous membrane of the esophagus, stomach and duodenum

26. What parts of the intestine can be examined with the help of sigmoidoscopy? (1,2) 1. Rectum; 2. Lower sigmoid colon

27. List the types of cystoscopes? (1,2) 1. Rigid cystoscope; 2. Fibrocystoscope

28. If bleeding occurs after endoscopy, follow these steps: (1,2,3,4) 1. Assign bed rest; 2. Call the doctor on duty for examination; 3. Take a blood test for hemoglobin, hematocrit, red blood cell count; 4. Conduct a second endoscopic examination

29. Describe the position of the patient during laparocentesis... The patient sits with his back supported on a chair, a container is placed on the floor between the legs to collect fluid.

30. Define the term "pleural puncture".... A surgical procedure that involves puncturing the chest wall and parietal pleura to extract fluid or gas

31. List the main complications of spinal (lumbar) puncture. (1,2,3,4,5,6,7)... 1. Axial insertion; 2. Meningism; 3. Infectious complications; 4. Headaches; 5. Hemorrhagic complications; 6. Damage to roots; 7. Damage to the intervertebral disc with the formation of a disc herniation.
